## Horizon welcomes consultation on Regulatory Justification

---

**Horizon Nuclear Power today welcomed the start of a consultation on the application for Regulatory Justification of the UK Advanced Boiling Water Reactor (UK ABWR).**

The Nuclear Industry Association (NIA) submitted an application for Regulatory Justification of the UK ABWR to the Secretary of State for Energy and Climate Change in December and today marks the start of a 12 week consultation period, during which stakeholders will have the opportunity to comment on the application ahead of the Secretary of State's draft decision.

The Regulatory Justification process is a legal requirement for new nuclear technology and is designed to ensure that the benefits to society of the UK ABWR outweigh any potential radiological health detriments.

Horizon Chief Operating Officer, Alan Raymant said:

"The consultation on the Regulatory Justification application of the reactor is an important milestone in our plans to develop power stations at Wylfa and Oldbury. We're very pleased to see good progress being made."

The consultation launch follows a string of significant developments at Horizon. In December the company signed a co-operation agreement with Her Majesty's Treasury, intended to lead to access the UK Infrastructure Guarantee Scheme. Horizon also signed important strategic framework contracts with engineering firms AMEC, Cavendish Nuclear, Atkins and Jacobs UK. In January the UK ABWR progressed to 'Step 2' of the Generic Design Assessment process.

Ken Sato, General Manager, Licensing, Hitachi Europe Ltd. for Hitachi-GE, said:

"Today's consultation shows continuing progress in the Regulatory Justification of the UK ABWR, which is just one of the robust processes which proposed nuclear technologies must undergo.

“Following on from the good progress which we’ve already made this year on Generic Design Assessment (GDA), the launch of the consultation takes us one step closer to deployment of the UK ABWR - creating jobs and supply chain opportunities, as well as providing affordable, secure and sustainable energy for UK homes and businesses.”

- ENDS -

#### **Notes to editors**

- Horizon Nuclear Power was formed in 2009 to develop new nuclear power stations in the UK. It was acquired by Hitachi Ltd of Japan in November 2012. The company is developing plans to build at least 5,400MW of new nuclear power generation plant at Wylfa on the Isle of Anglesey and Oldbury-on-Severn in South Gloucestershire.
