ENERGY WORKING FOR BRITAIN

Pencarreg Notable Wildlife Enhancement Site

Wetland creation at Pencarreg

The Wylfa Newydd development will result in the temporary clearance of a substantial area of farmland which supports a variety of wildlife.

To help these species disperse into the wider landscape and improve the capacity of the landscape to support these displaced species, Horizon has leased and enhanced 15ha of farmland adjacent to the proposed Wylfa Newydd development boundary. The habitat enhancement works, which commenced in 2017, include native scrub and hedgerow planting, species-rich grassland seeding, habitat pile creation, scrape creation and wetland improvements.

Hay meadow creation
